

Make a Woodland Food Chain

All living things need nutrients and energy which they get from food.

Some living things – plants – can use energy they get from sunlight to make their own food. They are called PRODUCERS.

Other living things, such as animals, cannot make their food in this way. To get food, some animals eat the plants (herbivores) and are known as PRIMARY CONSUMERS.

These are then eaten by other animals (carnivores), which are known as SECONDARY CONSUMERS. These are also sometimes omnivores – a creature that eats both animals and plants. The energy and nutrients pass through living things – from plant to animal, animal to animal – and this is called a food chain.

PRODUCER

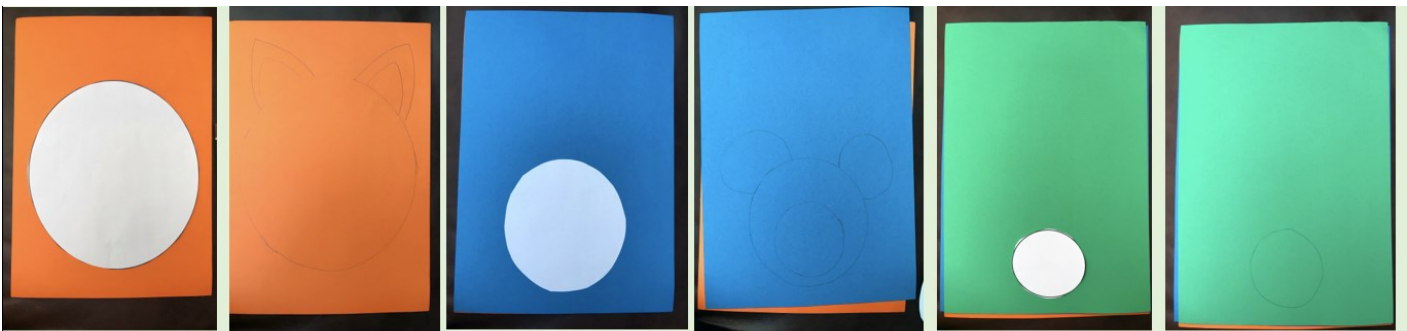

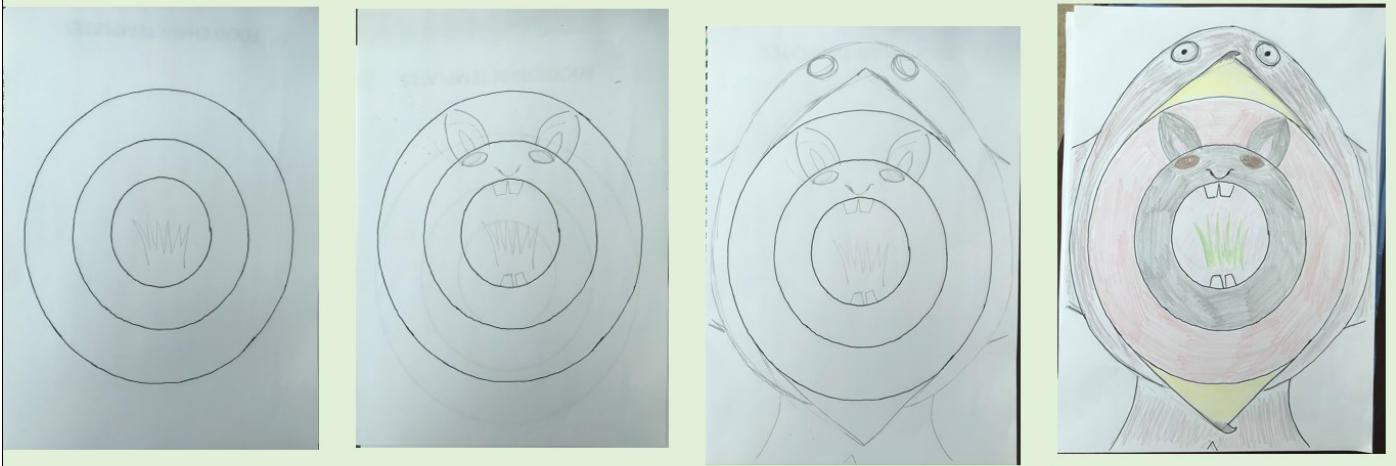

PRIMARY CONSUMER

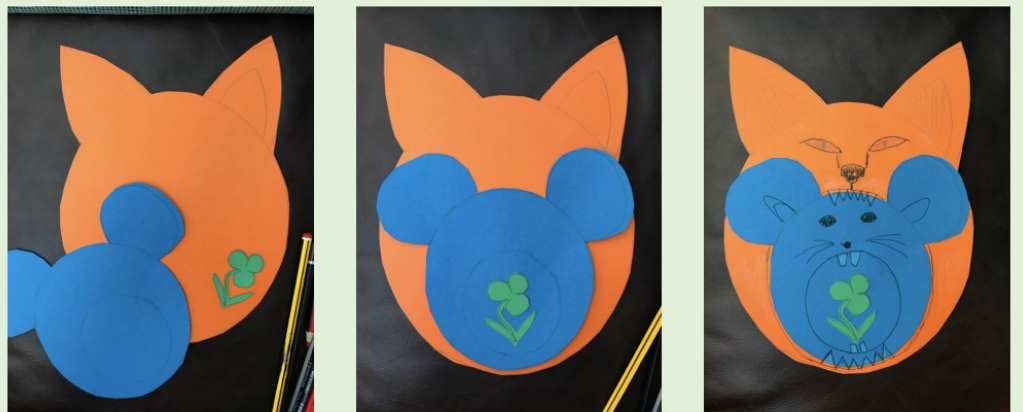

SECONDARY
CONSUMER

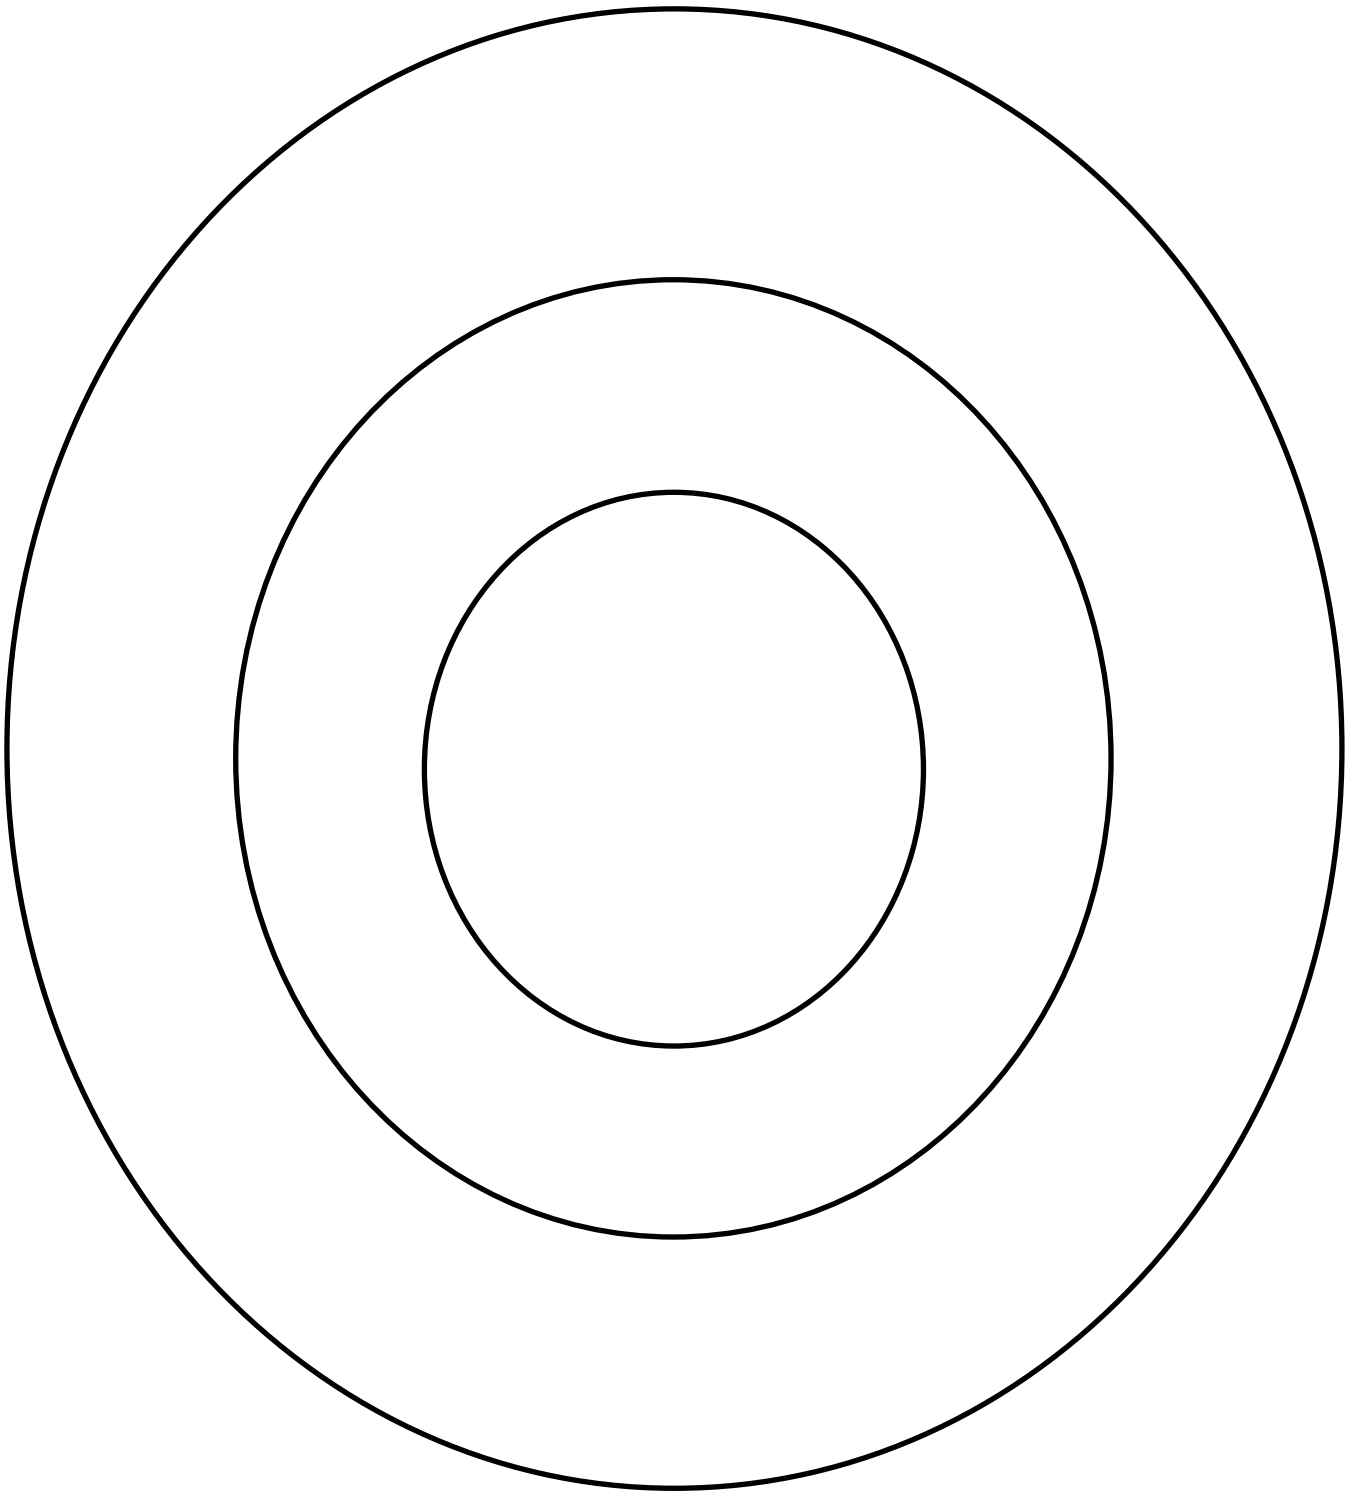

Link together animals in a food chain by drawing or collaging them in sequence.

DRAW: USE THE 3 CIRCLE TEMPLATE

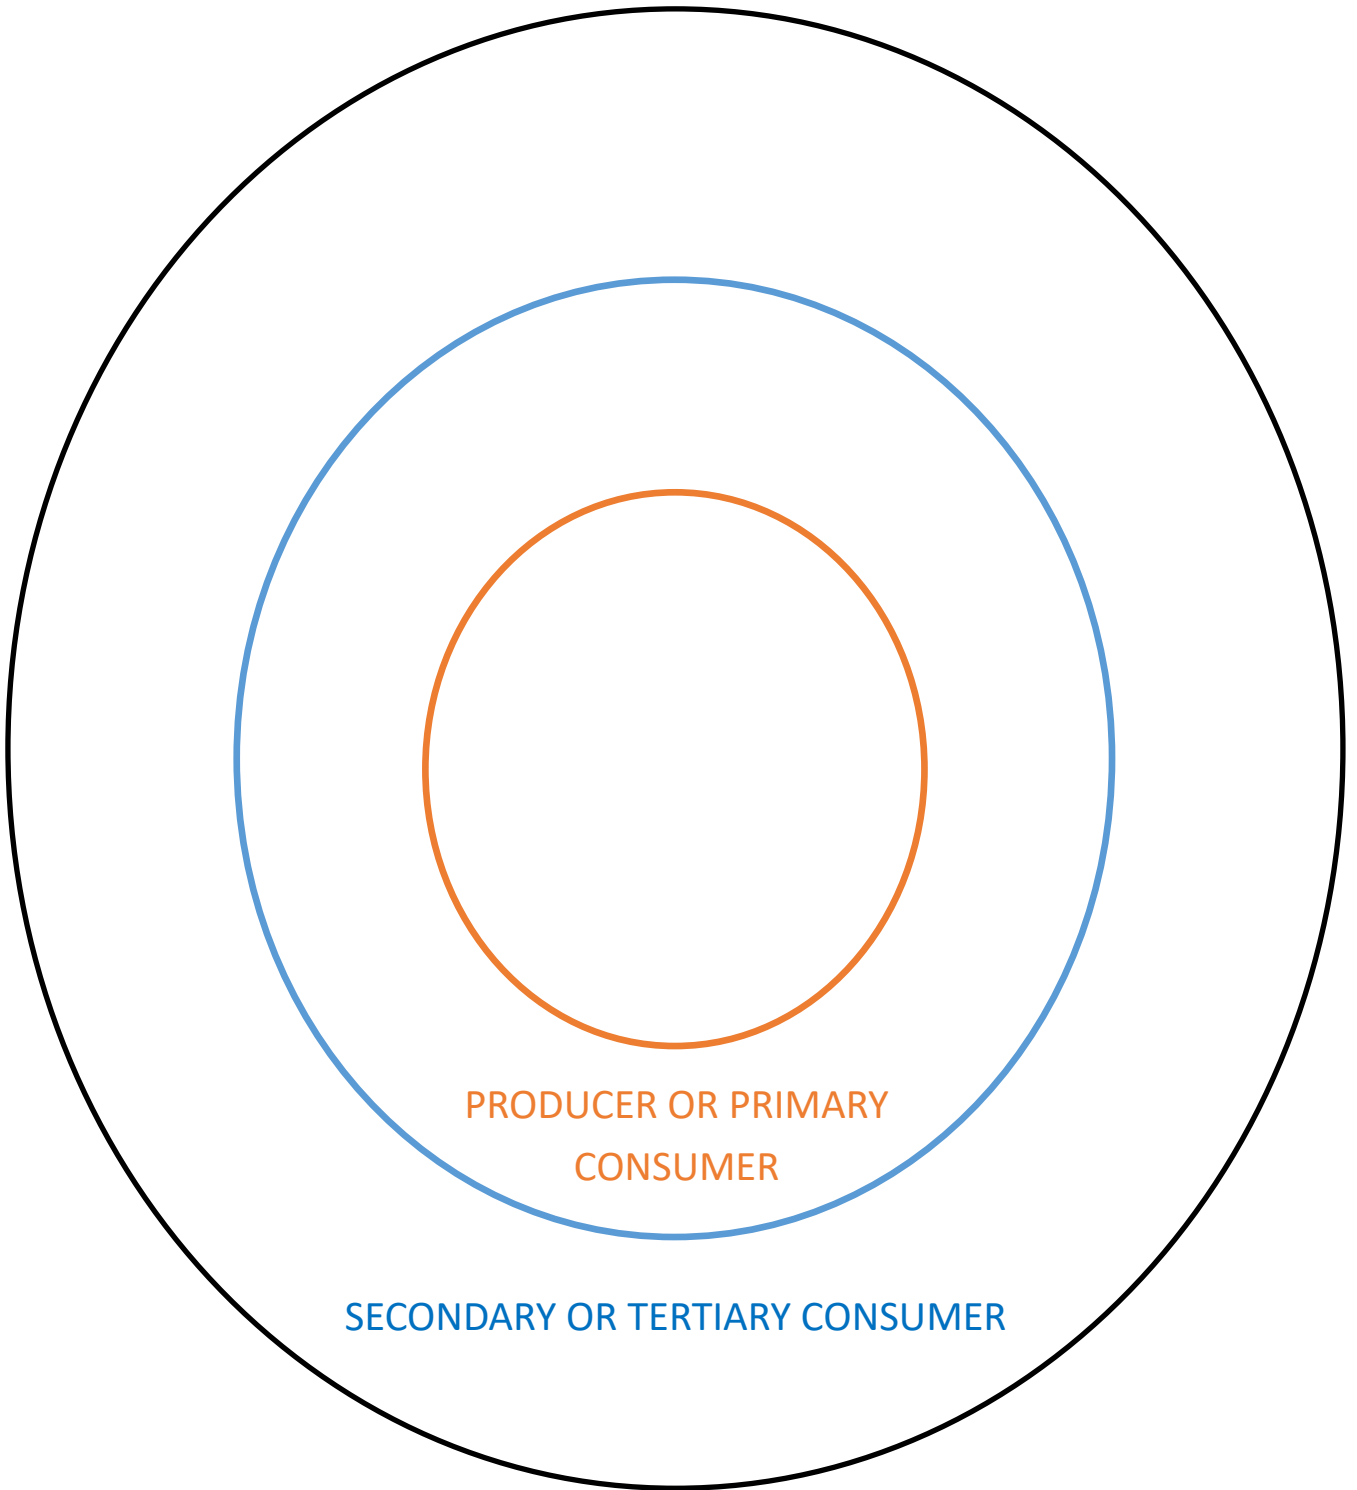

**CUT AND STICK:
USE THE
INDIVIDUAL CIRCLES
TO CUT OUT THREE
ORGANISMS AND
STICK TOGETHER**

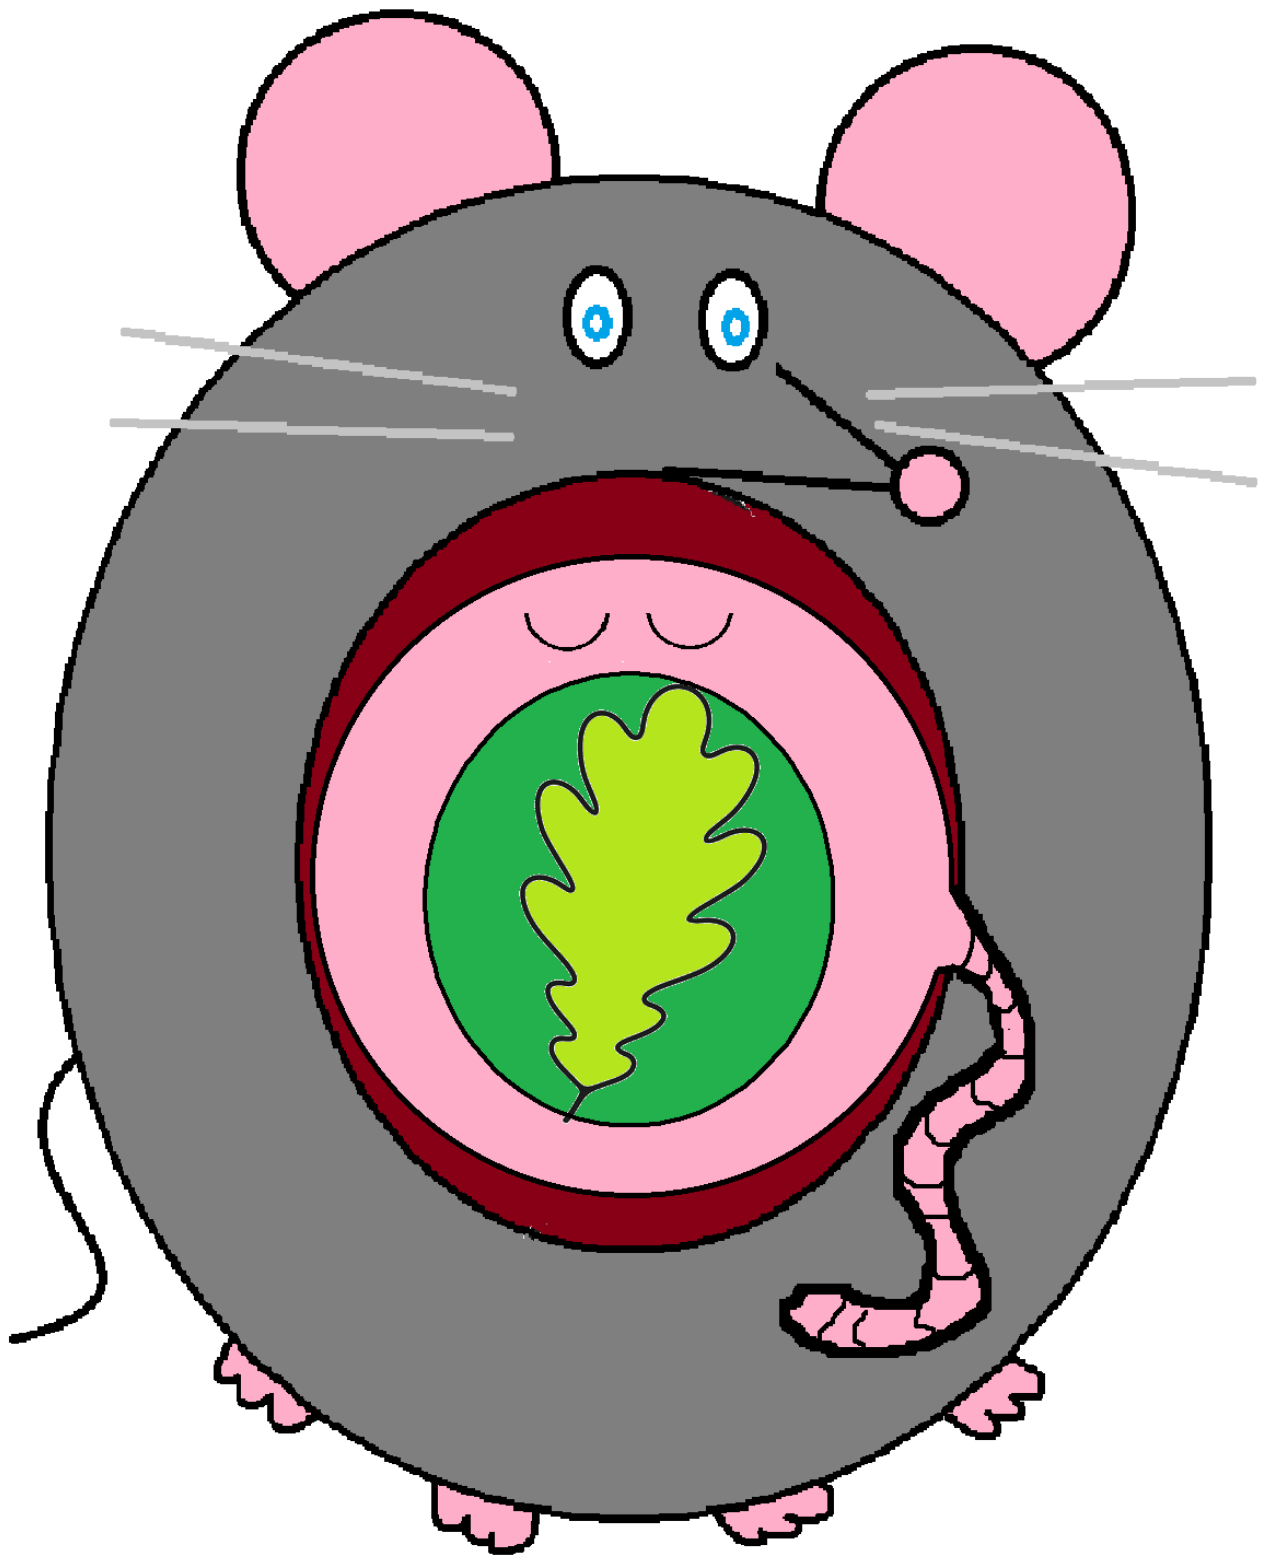

FOOD CHAIN TEMPLATES

PRODUCER OR PRIMARY
CONSUMER

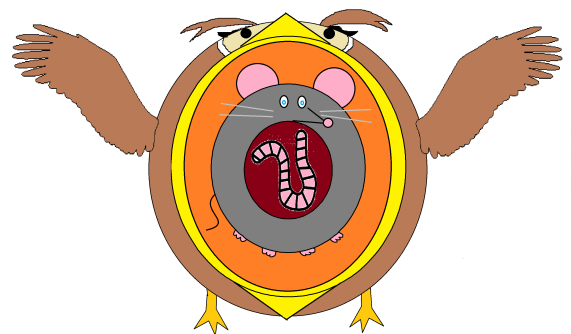

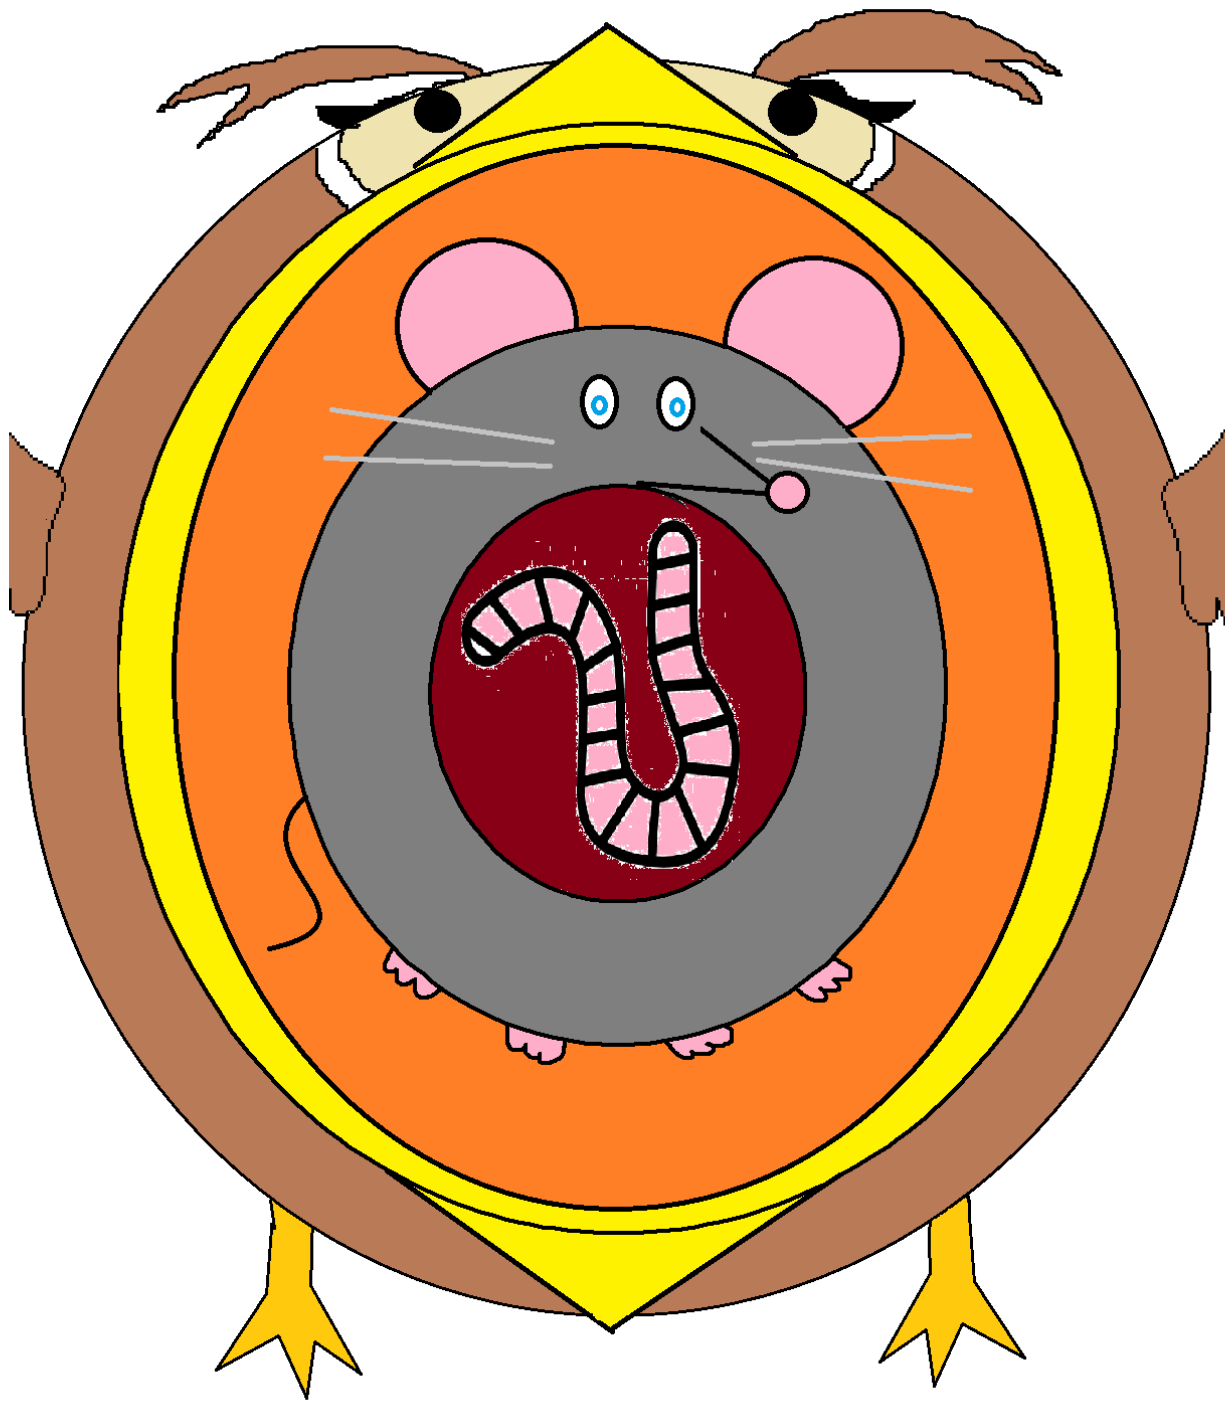

SECONDARY OR TERTIARY CONSUMER

PRIMARY OR SECONDARY CONSUMER

EXAMPLE:

PRODUCER > PRIMARY > SECONDARY

EXAMPLE:

PRIMARY > SECONDARY > TERTIARY
